

The Benefits

Smart 1 enabled the feasibility to be ascertained with the production of a crude prototype. After the feasibility of the product was established, Haemoband applied for Smart Stage 2 funding. Smart 2 enabled pre-production prototypes to be produced and enabled Haemoband to carry out clinical trials and tests to fully prove out the concept.

Participating in Smart enabled Haemoband to bring the product from an idea to the market place within 3 years. Without Smart this many never have happened.

“Smart 2 provided the additional support to turn a working model into a full limited run prototype which could be clinically trialed and demonstrated to interested doctors and potential distribution partners. This ensured that the final product offer was proven and national and international distribution contact established prior to final commitment to full production.”
Colin Foster, Managing Director,
Haemoband Surgical Ltd.
